Question 1

Question goes here?

Answer to question 1

Answer goes here; example answer below

$$\begin{aligned}3x^2 - 2ax + b &= -4 \\(-1)^3 - a(-1)^2 + b(-1) &= -4 \\-1 - a - b &= -4 \\+1 &\quad +1 \\-a - b &= -3(+a) \\+a & \\ \frac{-b}{-1} &= \frac{-3+a}{-1} \\b &= 3 - a\end{aligned}$$

Now we plugin the b function into the original "simplified" equation $-1 - a - b = -4$ and start solving for a

Now an example number line
